

Should Employees in Retail Food and Food Production Settings Wear Face Coverings to Prevent Exposure to COVID-19?

Posted April 4 at [fda.gov](https://www.fda.gov)

On April 3, the CDC released an updated [recommendation](#) regarding the use of cloth face coverings to help slow the spread of COVID-19. CDC recommends the use of simple cloth face coverings as a voluntary public health measure in public settings where other social distancing measures are difficult to maintain (e.g., grocery stores and pharmacies).

For workers on farms, and in food production, processing, and retail settings who do not typically wear masks as part of their jobs, consider the following if you choose to use a cloth face covering to slow the spread of COVID-19:

- Maintain face coverings in accordance with parameters in [FDA's Model Food Code](#) sections 4-801.11 Clean Linens and 4.802.11 Specifications.
- Launder reusable face coverings before each daily use.
- CDC also has [additional information on the use of face coverings](#), including washing instructions and information on how to make homemade face covers.

NOTE: The cloth face coverings recommended by CDC are not surgical masks or N-95 respirators. Those are critical supplies that must continue to be reserved for healthcare workers and other medical first responders, as recommended by current CDC guidance.
